PANSIES. VAUGHAN'S SUPER SWISS GIANTS MIXED.

# PANSIES

Pansies have long been a favorite with us. We introduced the Swiss Giants to American gardens and named and introduced the lovely Canadian variety, Maple Leaf, several years ago.

## GIANT MIXTURES

### VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

The flowers of this strain are of enormous size, 3 inches and over in diameter. They are perfectly round with overlapping petals, borne on strong stalks well above the remarkably luxuriant foliage. Thick petals, of a rich velvety texture, give this strain of pansy the required substance so necessary to a perfect pansy.

The superb colors and color combinations—salmons, yellows, pinks, rich reds and blues, are their distinctive feature. Excellent for greenhouse culture. Trade pkt., 60c;  $\frac{1}{8}$  oz., \$1.20;  $\frac{1}{4}$  oz., \$2.00; oz., \$7.00; lb. \$80.00.

### VAUGHAN'S SUPER SWISS GIANT MIXTURE

One of our leaders and represents the choicest strain of this popular and profitable flower. Combining the finest selections of several Pansy specialists, the perfect blending is further insured by the addition of separate colors that do not generally appear in the average mixture. Without question, the finest mixture of Swiss Giant Pansies on the market. Trade pkt., 75c;  $\frac{1}{8}$  oz., \$1.30;  $\frac{1}{4}$  oz., \$2.20; oz., \$8.00;  $\frac{1}{4}$  lb., \$28.00; lb. \$90.00.

### VAUGHAN'S DWARF SUPER SWISS MIXED

Special selection of Geneva Giants of dwarf habit. This type, being shorter and more compact, is more suitable to plant sales. The color range is as good as that of the Improved Swiss. Trade pkt., 60c;  $\frac{1}{8}$  oz., \$1.25;  $\frac{1}{4}$  oz., \$2.25; oz., \$8.00.

### VAUGHAN'S LONG STEMMED WINTER-FLOWERING MIXED RESELECTED

It has a much wider color range than other Winter-Flowering strains and has an excellent stem length, averaging better than 10 in. The bloom size is from  $2\frac{1}{2}$  to 3 in. and the flowers are of very good substance and sweet scented. Sow in summer for Mid-winter blooming and give support early. One of our florist customers writes on June 3, 1943.—"We had very good success with the last years seeds of Pansy Long Stemmed Winter Flowering. The colors and length of stem were exceptionally good." H. Florist, Toronto, Canada.  $\frac{1}{2}$  Trade pkt., 60c; Trade pkt., \$1.00;  $\frac{1}{8}$  oz., \$2.50;  $\frac{1}{4}$  oz., \$4.80.

### VAUGHAN'S MAPLE LEAF GIANT MIXED

A distinct variety we introduced several years ago, having very large leaves and flowers of gigantic size, 4 to 5 inches across, perfectly round, of heavy substance in many attractive colors and color combinations. Trade pkt., 60c;  $\frac{1}{8}$  oz., \$1.50;  $\frac{1}{4}$  oz., \$2.75; oz., \$9.00.

### VAUGHAN'S SUPER MAPLE LEAF MIXTURE "CANADIAN GIANTS"

This strain is even finer than the preceding, with flowers of unbelievable size and texture, larger than in any other strain, the plants are also of compact growth and the extra large foliage is a rich, dark green. Trade pkt., 90c;  $\frac{1}{8}$  oz., \$1.75;  $\frac{1}{4}$  oz., \$3.00; oz., \$10.00.

### VAUGHAN'S GIANT MIXTURE

Large flowers of good substance in a complete color range in light and dark shades. Probably the best general complete high grade mixture obtainable. Trade pkt., 50c;  $\frac{1}{4}$  oz., \$1.80; oz., \$6.00.

Varieties followed by a cross (X) we can supply in ½ trade pkts. at 60c each.

From observations of the Greenhouse Snapdragons listed, we make the following recommendations of popular sorts in the early flowering winter type, intermediate and late flowering varieties. First sowings can be made between June 10th and July 10th and selection of varieties made according to locality and climatic conditions. Early types planted in the South, with more light, will set buds earlier and not make suitable spikes. Each is good under certain conditions. For winter flowering, during dark days, the early types should be used and for after "Mums" and spring blooming the intermediate and late varieties.

The soil for growing Snapdragons should be porous and well drained. Raised benches are preferable to ground beds for winter crop. High nutrition, especially Nitrogen, and water combined, during the dark days, should be avoided as the results will be soft growth and off-colored shabby flowers.

For Spring Crop, after "Mums," when later and stronger growing varieties are used, ground beds may be used to better advantage, for with lengthening days and higher temperatures there are better growing conditions.

In the Early Pinks, **Christmas Cheer** is best. **Better Times**, a dark rose, is also early. Mary Ellen is a fine light pink. These three are first-cross hybrids, excellent early varieties and croppers. Yoders No. 33, a light pink of the Mary Ellen type, also is early. In the next group we would put Cheviot Maid Supreme Reselected, Rose Queen and Gilbert's Pink Supreme which are most popular. Cheviot Supreme Appleblossom, La France and Day Break fit in here but are later and can be planted for winter flowering. The first named sorts are more productive in our latitude during dark winter days. For after "Mums" Peggy Schumann, a salmon pink is very good; Schaffroth Pink is another. Mary Louise, St. Louis Pink, two fine light pinks, America, Terry's Surprise and Cincinnari, fit in here.

In the Bronze, the earliest are Sunlight and Suntan, the first being a little lighter in color. Afterglow, slightly later, is most popular; it makes a heavier spike and has deeper coloring. Bronze

Christmas Cheer, not as early as its name implies, is an open pollinated variety, later and of heavier growth. Talisman, the nearest all-double, is an early bloomer and excellent retail novelty. For after "Mums" and spring, there are Early Glorious and Kirkwood Beauty. Hodaly's Ideal Improved, with its contrasting white throat, comes in this group.

In the Yellows, the earliest are Ceylon Court Dark Selection, Yellow Wonder, which does not make any too large a head, and Goldie, which resembles a shorter Ceylon Court. Schlegel's Yellow, not as dark in color, comes next in blooming, followed by **Ethel**, the most popular variety on the market for winter and spring. Carol Jean is in season with Ethel, a shade lighter, larger flower and a cropper. To follow "Mums," for spring flowering, Coates Yellow Perfection, Klondyke Supreme, Sunray and Schumann's Yellow are good sorts.

In the Whites, Koester's White and Improved White Wonder are earliest pure whites. Margaret, a new comer, is also early; an ivory white of the same habit and type growth as Mary Ellen pink but with closer set florets and a little earlier. Peace, also new, is pure paper white, slightly larger than White Wonder, flowers more closely set on spike. Next in earliness is Schlegel's White; while not as white as the first two it has heavier stem and spike. Lucky Strike, the old favorite, is grown by many for early, mid-season and late; being heavier in growth it does not produce as much in winter. Lucky Strike Improved is not as heavy but slightly earlier. Westover's White (Early) is an early selection of the late sort. Marion White, Schaffroth's White, Snow White and Westover White are fine for after "Mums" or spring blooming.

In the Lilacs or Lavender, Windmiller Lilac is earliest. Bertha Baur and Schumann Lavender are late and to be planted only after "Mums," as probably all Lavenders should. Schumann Lavender is by far the most popular for stem and spike.

Christmas Red is earliest and the one to plant for winter production in this color. Velvet Supreme is taller and later, for after "Mums."

CALCEOLARIA Hybrida Grand. Triumph

CALCEOLARIA Grandiflora Extra Choice Mixed

## Vaughan's Calceolarias

These Make Wonderful Plants for Easter or Mother's Day

For Calceolarias, use a mixture of loam, leaf-mold and sharp sand. This mixture is suitable both for the seed pans and the pots into which the seedlings, when ready, should be planted. Perfect drainage is important. Calceolaria seed being very fine the seeding should be done with great care and it is suggested that one use a sheet of white paper on which a tablespoon of white sand is distributed. Then shake the seed on top of this sand and mix thoroughly. Then, sprinkle this mixture on the soil of the seed pan, dusting surface with a little fine sand, cover with a sheet of glass and place in the shade. For moisture, immerse the pans in water. As the seedlings come up lift them carefully when quite small and prick them off into a flat allowing two inches square for each plant. It is important that the leaves of one plant should never be allowed to overlap those of another or decay will probably result. When established in pots shift them into the larger size. At the last shift give them some manure water, not too strong, about once a week.

## VEGETABLES FOR SUMMER PLANTING

Every florist who has available land should grow vegetables for the market this summer, for two reasons:

He will get top market prices, and he will be contributing an essential service to the war effort, and qualifying his business for important priority ratings.

If you have a location for a roadside market near your plant, your vegetables can be sold at retail, together with any flowers which you may have in surplus.

Following are varieties which we recommend for summer sowings:

Many shortages exist in vegetable seed supply, and whether this year's crops will correct them no one can tell. In addition to labor scarcity, unfavorable weather conditions may cause poor crops.

# Stocks

Our stocks are produced by the most careful growers and are equal to the best in the market.

Varieties preceded by star (★) are the most popular colors.

A leaflet on "Methods of Selecting Double Flowered Stocks in the Seedling Stage," by Prof. S. L. Emsweller, will be included in all orders for Column Stock seed.

## "NON-BRANCHING" COLUMN STOCKS

These produce one enormous spike with large flowers, 2 to 2½ ft. high, and can be planted close together in the bench, which makes them a profitable type. Are in season with Bismarck variety.

ACHILLEA, The Pearl

ALYSSUM Saxatile Compactum

ANTHEMIS Sancta Johannis

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully.

# Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

## SEED GERMINATES SLOWLY AND IRREGULARLY

of the following varieties and seed bed should be prepared where it will be undisturbed for a year or more.

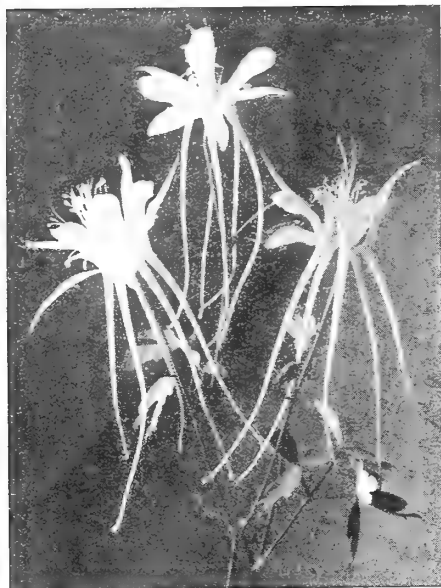

Aconitum, Anemone, Clematis, Delphinium Cardinale, Delphinium Nudicaule, Dictamnus, Dielytra, Iris, Phlox Decussata, Primulas Trollius and nearly all Alpines.

Rock Garden subjects are marked X.

The figures preceding the varieties are the rating given to them by the American Peony Society.

# Bulbs for Mid-Summer and Early Fall

## Freeseias CALIFORNIA GROWN

These low priced bulbs will pay good profits to florists who use them to grow flowers for the early winter. The flowers have brought good prices on all markets, and will be assured of an excellent demand next winter. Start bulbs in flats carried in cold frames until killing frosts come, then bring them into the greenhouse and force for the high January market.

Our Freeseias bulbs are grown by specialists who know how to handle the stock from the time of planting until they are packed and shipped. Why take a chance of buying from such dealers that buy from growers who grow for "cut flowers" and do not give their bulbs the best of care in digging, curing and shipping.

## White Calla

(Aethiopica) Ready in September

Callas being natives of swampy regions grow to best advantage where there is an abundance of moisture, and are therefore very difficult to handle in the curing. Some growers practice **premature cutting off the tops**, expose bulbs to the sun, in order to make early shipment.

Our stock is **thoroughly cured in the ground and dried carefully** before they are packed. This means **later delivery** but better results can be obtained from such bulbs.

We caution forcers of Callas to water this stock sparingly after planting because Calla bulbs store up considerable moisture.
